

AERIS Expert Review Packet

Anomaly

Source / metric	openaq / pm10
Observed / expected	175 / 28.5455
Time	2026-06-10 17:00 UTC
Location	29.7339, -95.2575
Severity	severe
Detectors	zscore, stl, isolation_forest

Stored evidence summary

Source	Metric	Unit	Entities / points	Range; mean	Nearest to event
asos	humidity	percent	9 / 638	52.69 to 100; mean 78.2346	58.88 at 2026-06-10 16:55Z; dt 5 min
asos	temperature	degC	9 / 638	23.3333 to 33.3333; mean 28.7535	31 at 2026-06-10 16:55Z; dt 5 min
asos	wind_direction	degree	9 / 637	0 to 200; mean 140.502	160 at 2026-06-10 16:55Z; dt 5 min
asos	wind_speed	m/s	9 / 639	0 to 10.2889; mean 4.5656	6.68777 at 2026-06-10 16:55Z; dt 5 min
noaa_gfs	gh_500	m	10 / 120	5897.03 to 5933.85; mean 5916.48	5920.04 at 2026-06-10 18:00Z; dt 60 min
noaa_gfs	pbl_height	m	10 / 120	134.31 to 1939.63; mean 851.295	1440.93 at 2026-06-10 18:00Z; dt 60 min
noaa_gfs	precipitable_water	mm	10 / 120	38.7218 to 52.7703; mean 46.9241	52.6759 at 2026-06-10 18:00Z; dt 60 min
noaa_gfs	surface_pressure	hPa	10 / 120	1005.86 to 1016.41; mean 1011.19	1012.08 at 2026-06-10 18:00Z; dt 60 min
noaa_gfs	t_850	degC	10 / 120	17.0319 to 20.1995; mean 18.6754	17.6074 at 2026-06-10 18:00Z; dt 60 min
noaa_gfs	u_10m	m/s	10 / 120	-4.7202 to -0.277048; mean -2.2602	-1.98728 at 2026-06-10 18:00Z; dt 60 min
noaa_gfs	v_10m	m/s	10 / 120	0.520322 to 6.25296; mean 3.6685	4.7092 at 2026-06-10 18:00Z; dt 60 min
openaq	ozone	ppm	17 / 1057	0.001 to 0.045; mean 0.0184	0.014 at 2026-06-10 17:00Z; dt 0 min

Claims

Mark exactly one box per claim: V (Valid), I (Invalid), or U (Unsure). The labeling guide that comes with this packet has the definitions and marking rules. Each claim appears exactly once, and the number printed next to it is how I'll refer to that claim if I need to ask you about it.

Claim 1 of 35

The air quality anomaly in Houston, Texas is likely caused by a combination of factors including high levels of PM2.5 and NO2 emissions from industrial activities and vehicle traffic.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 2 of 35

The air quality anomaly is related to PM2.5 levels.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 3 of 35

The air quality anomaly is caused by a nearby industrial facility releasing excessive amounts of particulate matter and volatile organic compounds.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 4 of 35

Industrial bulk material handling or fugitive dust emissions contributed to the PM10 spike at openaq without accompanying increases in combustion-derived gaseous pollutants measured by tceq.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 5 of 35

Localized mechanical dust resuspension from surface disturbance or nearby construction drove the coarse particulate spike recorded by openaq while ambient fine particle levels remained low on purpleair.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 6 of 35

The anomaly occurred on June 10th, 2026, at approximately 17:00:00+00:00.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 7 of 35

The air quality anomaly in Houston, Texas is caused by high levels of PM2.5.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 8 of 35

Meteorological conditions in Houston at the anomaly time were favorable for transport of mechanically generated dust because surface winds were southerly to south-southeasterly at about 3.6 to 6.7 m/s and afternoon boundary-layer height was deep near 1441 m.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 9 of 35

An OpenAQ monitoring station in Houston registered a severe PM10 concentration spike to 175.0 $\mu\text{g}/\text{m}^3$ on June 10, 2026, at 17:00 UTC.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 10 of 35

The PM10 anomaly value of 175.0 $\mu\text{g}/\text{m}^3$ exceeded the expected value of 28.545454545454547 $\mu\text{g}/\text{m}^3$ and had a z-score of 9.414583354484428, which is labeled severe in the anomaly record.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 11 of 35

At the time of the PM10 anomaly on 2026-06-10T17:00:00+00:00, nearby PM2.5 concentrations measured 23.7 $\mu\text{g}/\text{m}^3$ on openaq and 2.5 $\mu\text{g}/\text{m}^3$ on purpleair, indicating that the spike was predominantly coarse particulate matter.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 12 of 35

The air quality anomaly in Houston, Texas is not caused by changes in temperature or wind direction.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 13 of 35

Regional combustion smoke or widespread secondary aerosol production is contradicted because ozone was low at 0.014 ppm, TCEQ carbon monoxide was only 0.1 ppm, TCEQ sulfur dioxide was -0.1 ppb, and satellite carbon monoxide and nitrogen dioxide columns were not exceptionally elevated at the overpass time.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 14 of 35

The nearest OpenAQ PM2.5 measurement at the anomaly location and time was 23.7 ug/m3, while the nearest PurpleAir PM2.5 measurement 0.58 km away at 2026-06-10T17:00:00+00:00 was 2.5 ug/m3.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 15 of 35

Nearby PurpleAir and OpenAQ sensors maintained low fine particulate matter (PM2.5) averages below 10 µg/m³ during the PM10 spike, isolating the anomaly to coarse particulate matter.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 16 of 35

The isolated PM10 concentration spike recorded by openaq supports a localized source dominated by coarse-mode particles such as fugitive dust or construction activity.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 17 of 35

Surface meteorological observations near the anomaly recorded warm temperatures around 31 °C to 32 °C, relative humidity below 60%, and no precipitation, providing dry atmospheric conditions conducive to mechanical dust resuspension.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 18 of 35

Surface meteorology recorded by asos and openweather showed dry conditions, warm temperatures, and moderate wind speeds that facilitated local dust resuspension.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 19 of 35

The temperature and wind speed data suggest that the air quality anomaly was influenced by a heatwave event with temperatures reaching up to 33.53°C (92.5°F) and wind speeds of up to 3.58 m/s.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 20 of 35

A nearby dust source such as road dust, construction activity, or industrial material handling is meteorologically plausible because surface winds near the anomaly were southerly to south-southeasterly at about 6.7 m/s, no rain was reported, and the daytime boundary layer was deep near 1441 m, which supports transport of freshly generated coarse particles from upwind local sources rather than stagnation.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 21 of 35

Moderate surface wind speeds and strong daytime boundary layer convective mixing captured by asos and gfs enhanced local dust resuspension and transport across the area.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 22 of 35

The PM2.5 levels are elevated at 4.837 ug/m3, which is higher than the mean of 5.4045 ug/m3.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 23 of 35

The anomaly is due to a combination of factors including high temperatures, low humidity, and stagnant atmospheric conditions, which have led to the accumulation of pollutants in the Houston area.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 24 of 35

Local dust or soil entrainment is a leading physical cause of the PM10 spike because PM10 reached 175 ug/m3 while nearby PM2.5 remained much lower at 23.7 ug/m3 and nearby PurpleAir PM2.5 was only 2.5 ug/m3, a size pattern that is more consistent with coarse particles than with a regional fine-combustion plume.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 25 of 35

Low PM2.5 concentrations measured across the surrounding network by openaq and purpleair contradict a regional combustion or smoke transport event during the PM10 anomaly.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 26 of 35

The observed air-quality anomaly is a PM10 anomaly with a measured concentration of 175.0 ug/m3 at 2026-06-10T17:00:00+00:00 near 29.734, -95.257 in Houston.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 27 of 35

An openaq monitoring sensor located at coordinates (29.734, -95.257) recorded a severe PM10 concentration anomaly of 175.0 µg/m³ at 2026-06-10T17:00:00+00:00, significantly exceeding the expected baseline of 28.55 µg/m³ with a z-score of 9.41.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 28 of 35

Mechanical resuspension of road dust or industrial yard dust is a leading physical cause of the PM10 spike because surface winds near the anomaly were from the south-southeast at roughly 6.7 m/s and the daytime boundary layer was deep, conditions that favor lifting and transport of coarse particles from nearby surfaces and facilities.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 29 of 35

Regional combustion or an industrial gas-rich plume is not strongly supported at the anomaly time because local CO was 0.1 ppm, local SO₂ was -0.1 ppb, local ozone was 0.014 ppm, and satellite CO and NO₂ columns were not unusually elevated relative to adjacent days.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 30 of 35

The air quality anomaly in Houston, Texas is not caused by high levels of CO, NO₂, or SO₂ emissions.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 31 of 35

Construction activity or bulk-material handling near the monitor is a plausible physical cause of the PM₁₀ spike because the event was highly localized in PM₁₀ and was not accompanied by strong co-pollutant signals, with low local CO, modest NO₂, and near-zero SO₂ arguing against a dominant fresh combustion or sulfur-rich industrial plume.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 32 of 35

Local mechanical resuspension or dust emission is supported because the PM10 concentration reached 175 ug/m3 while nearby PM2.5 remained low to moderate at 23.7 ug/m3 in openaq and 2.5 ug/m3 in purpleair, a pattern characteristic of coarse particles rather than fine-particle regional haze.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 33 of 35

The CO, SO2, and O3 levels were also elevated during the air quality anomaly, indicating a potential contribution from industrial or vehicular sources.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 34 of 35

The Houston PM10 anomaly is most consistent with a local coarse-particle dust plume rather than a regional fine-particle pollution episode because PM10 reached 175 ug/m3 while nearby PM2.5 remained much lower at 23.7 ug/m3 in openaq and 2.5 ug/m3 in purpleair at the same time.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 35 of 35

A severe thunderstorm or tornado event in the Houston area has stirred up dust and debris, contributing to the air quality anomaly.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Optional: most likely cause

Your best guess at the true cause of this event, in your own words. "Insufficient evidence to determine a single cause" is a perfectly fine answer.
