

AERIS Expert Review Packet

Anomaly

Source / metric	openaq / pm10
Observed / expected	93 / 49.7963
Time	2026-07-23 01:00 UTC
Location	29.6700, -95.1285
Severity	severe
Detectors	zscore, stl, isolation_forest

Stored evidence summary

Source	Metric	Unit	Entities / points	Range; mean	Nearest to event
asos	humidity	percent	7 / 746	29.01 to 100; mean 70.9953	83.93 at 2026-07-23 00:55Z; dt 5 min
asos	temperature	degC	7 / 746	24.7778 to 39; mean 30.0681	29 at 2026-07-23 00:55Z; dt 5 min
asos	wind_direction	degree	7 / 906	0 to 360; mean 171.369	180 at 2026-07-23 00:55Z; dt 5 min
asos	wind_speed	m/s	7 / 928	0 to 8.74555; mean 3.0013	2.05778 at 2026-07-23 00:55Z; dt 5 min
noaa_gfs	gh_500	m	8 / 96	5919.35 to 5959.62; mean 5936.39	5931.74 at 2026-07-23 00:00Z; dt 60 min
noaa_gfs	pbl_height	m	8 / 96	17.7446 to 2017.14; mean 666.612	980.668 at 2026-07-23 00:00Z; dt 60 min
noaa_gfs	precipitable_water	mm	8 / 96	32.3551 to 67.4723; mean 50.9081	58.4769 at 2026-07-23 00:00Z; dt 60 min
noaa_gfs	surface_pressure	hPa	8 / 96	1003.85 to 1014.98; mean 1008.94	1005.31 at 2026-07-23 00:00Z; dt 60 min
noaa_gfs	t_850	degC	8 / 96	17.875 to 24.7709; mean 20.9541	24.3609 at 2026-07-23 00:00Z; dt 60 min

Claims

Mark exactly one box per claim: V (Valid), I (Invalid), or U (Unsure). The labeling guide that comes with this packet has the definitions and marking rules. Each claim appears exactly once, and the number printed next to it is how I'll refer to that claim if I need to ask you about it.

Claim 1 of 35

The tceq monitor co-located with the PM10 anomaly showed low CO at 0.1 ppm, low NO2 at 8.3 ppb, and very low SO2 at 0.2 ppb at 2026-07-23T01:00:00+00:00, which argues against a strongly combustion-dominated or sulfur-rich plume as the primary cause of the PM10 spike.

Calm-wind flag: wind direction unstable under calm conditions. noaa_gfs: event wind 1.4533058882624432 m/s, below its cutoff of 1.5 m/s (mean - 2*SD gave 1.1164708013951699 m/s; n=96 wind readings). Cutoff floor: confirmed 2026-07-24.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 2 of 35

The air quality anomaly is related to PM2.5 levels.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 3 of 35

A sharp drop in planetary boundary layer height from 1741 meters at 18:00 UTC to 533 meters at 00:00 UTC modeled by gfs restricted atmospheric volume and trapped ground-level particulate matter.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 4 of 35

The openaq PM10 anomaly at 2026-07-23T01:00:00+00:00 occurred at 29.670, -95.129 in Houston and had a measured value of 93.0 ug/m3 versus an expected value of 49.7962962962963 ug/m3, corresponding to a z-score of 4.562483573996698 and severe classification.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 5 of 35

The anomaly occurred on July 23rd, with the highest PM2.5 levels recorded at 14:63 ug/m3.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 6 of 35

The nearest openaq PM10 sensor at the anomaly location reported 93.0 ug/m3 at 2026-07-23T01:00:00+00:00, while the 6-hour mean for openaq PM10 centered on 2026-07-23 00Z was 55 ug/m3.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 7 of 35

The elevation of PM10 relative to PM2.5 measured by openaq alongside low concurrent concentrations of NO2, CO, and SO2 reported by tceq suggests a mechanical dust source rather than an industrial combustion event.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 8 of 35

The air quality anomaly in Houston, Texas is caused by high levels of PM2.5 particles.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 9 of 35

The PM2.5 levels are elevated, with a mean of 11.7877 ug/m3 and a range of 0.0-149.3 ug/m3.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 10 of 35

The PM10 anomaly at 2026-07-23T01:00:00+00:00 registered a z-score of 4.56 and was classified as severe by zscore, stl, and isolation forest algorithms.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 11 of 35

The nearest openaq PM2.5 sensor at the anomaly location reported 20.4 ug/m3 at 2026-07-23T01:00:00+00:00, and the nearest purpleair PM2.5 sensor 6.212 km away reported 11.5 ug/m3 at the same time.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 12 of 35

The temperature inversion over the Houston area is causing a buildup of pollutants near the surface.

Mark exactly one:

☐ V

☐ I

☐ U

Note:

Claim 13 of 35

The GFS model indicated a collapse of the planetary boundary layer height to approximately 533 meters around 2026-07-23T00:00:00Z.

Mark exactly one:

☐ V

☐ I

☐ U

Note:

Claim 14 of 35

Convective storm activity recorded by openweather and asos around 01:00 UTC on July 23 produced localized rainfall up to 11.53 mm/h and wind gusts, supporting mechanical resuspension of coarse dust prior to rain washout.

Mark exactly one:

☐ V

☐ I

☐ U

Note:

Claim 15 of 35

The air quality anomaly in Houston, Texas is caused by high levels of SO₂ particles.

Mark exactly one:

☐ V

☐ I

☐ U

Note:

Claim 16 of 35

A combustion-dominated or sulfur-rich industrial plume is contradicted because collocated regulatory gases remained modest near the anomaly, with CO at 0.1 ppm, NO₂ at 8.3 ppb, SO₂ at 0.2 ppb, and satellite SO₂ near zero on the prior overpass, despite somewhat elevated satellite CO and HCHO earlier that day.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 17 of 35

A nearby industrial facility or power plant is releasing excessive amounts of particulate matter and other air pollutants into the atmosphere.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 18 of 35

At 2026-07-23T01:00:00+00:00, an openaq monitoring sensor at (29.670, -95.129) recorded a PM₁₀ concentration of 93.0 µg/m³ against an expected value of 49.8 µg/m³.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 19 of 35

The air quality anomaly in Houston, Texas is caused by high levels of NO₂ particles.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 20 of 35

The air quality anomaly in Houston, Texas on July 24th is likely caused by a combination of factors including weather patterns and local emissions.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 21 of 35

Meteorological conditions near eastern Houston around the anomaly included high humidity near 84 to 86 percent, southerly to southwesterly surface flow, low-to-moderate wind speeds, extensive cloud cover, and nearby rainfall exceeding 11 mm/h, which supports a transient shower or outflow process capable of locally lofting coarse particles.

Calm-wind flag: wind direction unstable under calm conditions. noaa_gfs: event wind 1.4533058882624432 m/s, below its cutoff of 1.5 m/s (mean - 2*SD gave 1.1164708013951699 m/s; n=96 wind readings). Cutoff floor: confirmed 2026-07-24.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 22 of 35

The air quality anomaly in Houston, Texas on July 24th is also characterized by elevated levels of NO₂.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 23 of 35

Rain-associated particle growth and wet mechanical splash or resuspension is a plausible contributor to the eastern Houston PM10 spike because humidity near the anomaly was high at about 84 to 86 percent and openweather reported precipitation near 11.53 mm/h at nearly the same time.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 24 of 35

Rapid evening stabilization and collapse of the planetary boundary layer modeled by gfs suppressed vertical mixing, leading to localized accumulation of coarse particulate matter.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 25 of 35

An openaq monitor in Houston recorded a PM10 concentration spike of 93.0 $\mu\text{g}/\text{m}^3$ at 2026-07-23T01:00:00Z.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 26 of 35

A local coarse-particle plume from road dust, industrial material handling, construction activity, or similar mechanically generated dust is a plausible cause of the eastern Houston PM10 spike because PM10 reached 93 $\mu\text{g}/\text{m}^3$ while colocated PM2.5 was only 20.4 $\mu\text{g}/\text{m}^3$ and nearby PurpleAir PM2.5 remained modest rather than showing an equally extreme fine-particle increase.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 27 of 35

A local coarse-particle event is supported because the anomalous eastern Houston PM10 concentration reached 93 $\mu\text{g}/\text{m}^3$ at 01:00 UTC while the colocated PM2.5 concentration was only 20.4 $\mu\text{g}/\text{m}^3$ and nearby PurpleAir PM2.5 was 11.5 $\mu\text{g}/\text{m}^3$, indicating a much stronger coarse-mode than fine-mode enhancement.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 28 of 35

Transport of coarse material from the Gulf or ship-channel sector is a plausible contributor to the eastern Houston PM10 spike because local winds near the anomaly were southerly to south-southwesterly at roughly 180 to 203 degrees with light-to-moderate speeds around 2 to 5 m/s during a humid marine air mass.

Calm-wind flag: wind direction unstable under calm conditions. noaa_gfs: event wind 1.4533058882624432 m/s, below its cutoff of 1.5 m/s (mean - 2*SD gave 1.1164708013951699 m/s; n=96 wind readings). Cutoff floor: confirmed 2026-07-24.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 29 of 35

Convective outflow winds associated with localized rain showers detected by openweather and asos likely re-suspended coarse surface dust, generating the PM10 spike observed by openaq.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 30 of 35

A weather pattern or storm system is bringing in air from a nearby region with poor air quality, contributing to the anomaly.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 31 of 35

OpenWeather meteorological data recorded wind speeds reaching 4.73 m/s and precipitation rates of 11.53 mm/h near the anomaly location around 2026-07-23T01:00:00Z.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 32 of 35

Fugitive dust or industrial point-source particulate emissions near the monitoring site recorded by openaq and evaluated alongside baseline combustion gases from tceq contributed to the elevated PM10 reading.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 33 of 35

Rain-related mechanical aerosol generation and resuspension are supported because humidity near the anomaly was about 84 to 86 percent, cloud cover was about 85 percent, precipitation near the site was 11.53 mm/h, and low-level winds were southerly to south-southwesterly around 180 to 203 degrees at roughly 2.1 to 4.7 m/s near the anomaly time.

Calm-wind flag: wind direction unstable under calm conditions. noaa_gfs: event wind 1.4533058882624432 m/s, below its cutoff of 1.5 m/s (mean - 2*SD gave 1.1164708013951699 m/s; n=96 wind readings). Cutoff floor: confirmed 2026-07-24.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 34 of 35

The openaq monitor at eastern Houston recorded a severe PM10 enhancement to 93 $\mu\text{g}/\text{m}^3$ at 2026-07-23T01:00:00+00:00 while nearby PM2.5 was only moderately elevated near 20.4 $\mu\text{g}/\text{m}^3$, which is more consistent with a coarse-particle event than with a fine-particle-dominated smoke episode.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Claim 35 of 35

The air quality anomaly in Houston, Texas on July 24th is characterized by elevated levels of PM2.5.

Mark exactly one:	☐ V	☐ I	☐ U
-------------------	----------------------------	----------------------------	----------------------------

Note:

Optional: most likely cause

Your best guess at the true cause of this event, in your own words. "Insufficient evidence to determine a single cause" is a perfectly fine answer.
