Claims

Mark exactly one box per claim: V (Valid), I (Invalid), or U (Unsure). To skip a claim, leave all three boxes blank; a blank is recorded as missing and never turned into Unsure. Each claim appears exactly once, and the number printed next to it is how I'll refer to that claim if I need to ask you about it.

Label definitions, from the labeling guide

Valid (V): the claim holds up at the precision it states, and the evidence in the packet supports it.

Invalid (I): the evidence in the packet contradicts the claim, the claim misstates a measurement, or the physical reasoning does not hold.

Unsure (U): you cannot tell from what is shown. This covers thin evidence, measurements that cannot resolve the claim, ambiguous wording, and anything outside what you are comfortable judging.

Missing or thin evidence means Unsure, not Invalid.

A cause that is plausible but unproven stays Unsure unless the evidence actually contradicts it.

Some claims bundle several statements into one sentence. Judge those by their parts. If every part earns the same verdict, use that verdict.

Note (optional):

Claim 4 of 36

Air-quality co-pollutants near the anomaly are most consistent with a fresh local NO_x plume rather than a regional secondary pollution event because ozone was low while PM_{2.5}, PM₁₀, CO, and SO₂ were not simultaneously elevated to similarly extreme levels.

Note (optional):

Claim 5 of 36

A fresh local combustion plume from nearby mobile, industrial, marine, rail, or terminal activity is a likely physical cause of the 27 ppb NO₂ spike because the anomaly occurred at one monitor with simultaneously low ozone, near-baseline CO, and no corresponding particulate spike, which is consistent with a localized NO_x-rich plume rather than a broad regional pollution episode.

Claim 12 of 36

A local primary NO_x plume is supported because the anomalous TCEQ monitor measured NO₂ at 27.0 ppb at 2026-06-16 01:00 UTC while ozone at the co-located nearby OpenAQ sensor was only 0.015 ppm, a pattern consistent with fresh NO_x emissions that suppress ozone near the source.
